WORK EXPERIENCE

Software Development • Internship

Apr 2025 - Present

Aerica Engineering Pvt Ltd, Mumbai

I'm currently working at Aerica Engineering Private Limited as a Software Developer, where I've gained strong technical knowledge and hands-on experience in understanding and solving complex problems efficiently.

Full Stack Development • Internship

Mar 2024 - Dec 2024

Webluxdigi, Mumbai

- As a Full Stack Developer . I have experience in handling Web Sites building and server administration
- Including contabo and InterServer,I also have knowledge of Linux and related technologies.

Machine Learning • Internship

Jul 2023 - Sep 2023

OPS Info Tech, Mumbai

- My internship as a machine learning intern was a valuable experience.
- I gained insights into training machine learning models and utilizing
- AI effectively,I learned how to work with data, manipulate it, and harness its power.

Java Development • Internship

Apr 2023 - Jun 2023

SDAC Info Tech, Mumbai

An internship as a Java developer is a great way to gain hands-on experience and learn more about software development.

EDUCATION

Master of Science (M.Sc), Computer Science

2024 - 2026

Thakur College of Science & Commerce, Mumbai

Bachelor of Science (B.Sc), Computer Science

2021 - 2024

Thakur College of Science & Commerce, Mumbai

Senior Secondary (XII), Maharashtra

2021

Science

Nirmala Memorial Foundation Collage Of Science And Commerce

Secondary (X), Maharashtra

2019

St. Thomas Mar Thomas School

PROJECTS

Team Collaboration & Storage Solution

May 2025

I built a central file server using Linux to solve our team's disorganized file sharing. We had important files scattered everywhere, which was insecure and slowed everyone down. I created one secure, central place—like a private Dropbox—where the whole team could access their work. It streamlined our workflow and made collaborating much safer.

GIS

Jun 2025 - Present

I built a role-based web application using Laravel and MySQL. The system is designed for managing field operations and has three roles: Super Admin, Admin, and User.

The core feature is that Users can log projects, which includes attaching files like videos or images and capturing the precise start and end location coordinates.

Admins can then manage these users and, most importantly, view all this data on an interactive Google Map. The map plots the start and end points for every project, allowing the Admin to visualize where the work was performed.

I also implemented advanced security, like a cascading block system where a Super Admin can block an Admin, which automatically blocks all users under them.

SKILLS

• HTML

• CSS

• Linux

- Python
- JavaScript
- PHP
- SQL
- Laravel

EXTRA CURRICULAR ACTIVITIES

- As an NSS volunteer for two years, I've learned valuable skills like teamwork, effective communication, and public speaking. I've grown by stepping out of my comfort zone, pushing my limits, and developing empathy. My experience has strengthened my desire to help others and contributed to my personal growth, shaping me into a more responsible and compassionate individual.
